SUMMARY

Aspiring APM on the founding team of a B2B telematics marketplace, with **INR 3.2 Cr (~$375K) revenue closed in ~6 months**, **50+ system integrators onboarded** and **zero cancellations across 60 customers**. Owned the full loop: customer complaints and discovery calls → **self-initiated PRD** → **clickable prototype** → **shipped release** → post-launch tracking of **revenue run-rate and churn**. Customer-facing B2B SaaS background across **US, EMEA and APAC**, so every spec is grounded in real buyer problems. Strong with **SQL, Mixpanel and A/B testing**; comfortable working remote and async with design and engineering. Airtribe AI-First PM Program (2026).

EXPERIENCE

Business Development Manager & Product (Freelance + Founding Team) — U.S. B2B SaaS Clients & B2B Fleet-Telematics Marketplace (NDA), India · Remote · *Jun 2025 – Present*

- **Onboarded 50+ system integrators** through partner discovery calls and demos as 1 of 3 founding team members; helped close **INR 3.2 Cr (~$375K) in ~6 months**, including one **INR 60 lakh deal**.
- Tracked revenue and retention post-launch: **avg ~INR 53 lakh/month, ~INR 6.4 Cr annualized run-rate** and **0 cancellations (0% churn) across 60 customers**; used the data to prioritize the roadmap.
- Reviewed customer complaints and support tickets alongside discovery calls with system integrators and fleet operators; found recurring gaps in **warranty tracking**, unclear value proposition, and **search, trust and checkout**.
- Wrote a **PRD on my own initiative**: 12 prioritized requirements (P0/P1), user stories, acceptance criteria, business rules, risks and success metrics, with a 2-week baseline set before targets.
- Built the **first clickable prototype** myself; the UI team used it as the reference for the final design (advanced search, Verified filter, list/card views, GST-ready checkout), which **shipped to customers**.
- Iterated after launch with a UI refresh, **AI search**, improved advanced search and a **WhatsApp support bot**; now building a **warranty-tracking module** and aligning ordering, FASTag and payment workflows with hardware and banking partners.

Business Development Manager — Mobility Foresights (Market Research), Remote · *Oct 2024 – Jan 2025*

- Closed **17 enterprise deals ($58K)** and built **$324.6K pipeline** with senior stakeholders in the US, EMEA and APAC, on a 25–45 day sales cycle (deal sizes $2.5K–$7.5K).
- Owned and expanded a **Fortune 1000 account portfolio** (Sony, Samsung, Hitachi, Siemens, Taro) across the US, EMEA, APAC and LATAM.
- Achieved **98% of quota** through renewals and expansion by researching accounts, multi-threading into C-level stakeholders and following up consistently.

Assistant Manager, Corporate Sales — 99acres.com (Info Edge), PropTech · *Nov 2023 – Jun 2024*

- Restructured the discovery process, raising **quarterly quota attainment from 78% to 108%** at an **85% pipeline-to-close rate**; tracked pipeline, leads and forecasts in HubSpot.
- Won **30+ new B2B logos** from scratch by mapping product packages to customer use cases, through cold calling, email outreach and follow-ups with business owners, marketing heads and operations managers.
- Combined phone outreach with **field visits**, meeting 6–7 leads in person every day.

Business Development Associate — BYJU'S, EdTech · *Nov 2022 – Aug 2023*

- Turned recurring customer objections into a **sales enablement playbook**; raised **quarterly quota attainment from 58% to 92%** across 10–12 demos a week.
- Made **150+ outbound cold calls daily** at a 10–15% connect rate, generating **INR 29 lakh in closed revenue**; booked 20–25 appointments a week.
- Trained teammates on **objection handling and CRM hygiene**.

PRODUCT PROJECTS & CASE STUDIES — Airtribe AI-First PM Program

Commitment Cards: Fireflies.ai Product Capstone — Individual capstone, 14 days, full 9-step PM framework · *Oct 2026* · Interactive Prototype

- **Problem:** Fireflies.ai extracts meeting commitments but sends them as a broadcast summary email with no owner, due date or status. Only **28%** reach a resolved state (done, reassigned or dropped) within 14 days. The brief's goal was to **target 45% in 6 months** without a surveillance feel.
- **Research:** Ran **19 recorded interviews** across 3 companies (10 sales reps, 6 team leads, 3 CEOs/founders), each on one real commitment. Tested Fireflies hands-on on a real client call; built a competitor table and stakeholder map. **Key insight:** commitments broke most at **visibility (8 of 19)**, then ownership (4); when work depends on another team, status is not visible in one place.
- **Prioritization:** Generated 14 ideas, ranked with **RICE** (my own estimates), chose 2 solutions and documented what not to build (closure auto-detection, individual manager ranking, calendar blocks, a full PM tool).
- **Solution:** Designed **Commitment Cards**: a card per commitment with owner, due date and source quote; owner consent (Accept / Not mine / Reassign); "Waiting on" tag and "I'm blocked" button; a public reply link so other teams respond without an

account; one daily digest; one-click Done / Reassign / Drop; a team view with status counts and no per-person ranking.

- **Metrics:** North Star = 14-day resolution rate (28% → 45% target). Defined supporting metrics (owner acceptance, time to first action, cards with due date, blocked items cleared) and guardrails (digest mute rate, drop misuse, "Not mine" rate, surveillance complaints).
- **Deliverables:** PRD, before/after and UX flow diagrams, OKR table, risks and mitigations, 17-slide deck and ~15-minute recorded walkthrough. Built a 6-screen **interactive concept prototype** in Lovable (sample data, no pilot or real users).

VitaFit — Retention Strategy — View Case Study

- **Problem:** Users were dropping off sharply between **day 14 and day 21**, hurting long-term retention.
- **What I did:** Analyzed the retention curve, traced the drop-off to **2 root causes**, and wrote a **PRD for streak recovery** covering user stories, edge cases and success metrics.
- **Outcome:** Defined a **5% beta rollout**, a **6-week A/B test** and clear **ship / no-ship criteria**.

Zomato — Funnel Analysis & Metrics — View Case Study

- **Problem:** Needed to find where the ordering funnel leaks most and which fixes matter first.
- **What I did:** Mapped a **7-stage funnel**, ranked fixes by impact vs effort, and proposed a **quality-based North Star metric** with a **metric tree** linking 8 initiatives.
- **Outcome:** A prioritized roadmap where every initiative ties back to one North Star.

QuickBite — System Design (5K to 2M users) — View Case Study

- **Problem:** Delivery platform had to scale 400x without over-engineering early.
- **What I did:** Recommended a **modular monolith**, sized peak load at **~5,800 location writes/sec**, and set **latency and consistency targets** with engineering trade-offs.
- **Outcome:** A phased scaling plan with clear triggers for when to split into services.

SKILLS

Product: Discovery & customer interviews, problem framing, PRDs & specs, user stories, acceptance criteria, prioritization (RICE, MoSCoW, P0/P1), MVP scoping, prototyping & wireframing, success metrics & KPIs, A/B testing, competitive analysis, UAT, Agile/Scrum
Data & Tools: SQL (basic), Mixpanel, Google Analytics, Excel / Google Sheets, Jira, Confluence, Notion, Figma, Loom, HubSpot, Salesforce
AI: LLM tools (ChatGPT, Claude, Gemini), prompt engineering, AI-assisted workflows, AI product thinking
Domain: B2B SaaS, two-sided marketplaces, fleet telematics / IoT, search & discovery, checkout & GST invoicing, payments, partner integrations

EDUCATION

AI-First Product Manager Program — Airtribe · *Jul – Oct 2026*
Bachelor of Business Administration (Marketing) — Parul University, India · *2019 – 2022*
